

Fiberglass Plate

Fiberglass plate is available in the same resins and colors as our standard grating products. Other colors, resins, custom thicknesses, and panel sizes are available for special order. See chart below for more information on standard sizes.

Both VersaGrate's fiberglass plate and covered grating should be installed using mechanical fasteners. VersaGrate's F-Clip provides a solid anchor point, while eliminating tripping hazards associated with higher profile fasteners.

Whether installed over existing grating, or used as a non-slip surface over concrete or other solid surfaces, VersaGrate's fiberglass plate creates a durable and safe walking surface.

Fiberglass plate is made by laminating sheets of fiberglass mats with VersaGrate's high quality resin systems. Grit top surface is standard on all plate products, providing an excellent anti-slip walking surface that is superior to diamond plate, as well as other solid plate products. Fiberglass plate is also lightweight and easy to cut, making installation easy and inexpensive.

Thickness	Standard Panel Size	Part Number	Weight Per Sqr. Foot
3/16"	4' x 12'	M-PLATE-316-A	1.93
1/4"	4' x 12'	M-PLATE-14-A	2.60
3/8"	4' x 12'	M-PLATE-38-A	3.91
1/2"	4' x 12'	M-PLATE-12-A	5.45

Grit top surface is standard. Other thicknesses, panel sizes, and options are available for special order.
